

Frontend Theory Assignment - 2

What is CSS Box Model?

→ The CSS box model is a concept used to understand how elements are displayed on a webpage. Every HTML element is treated like a box.

The box consists of 4 main parts:

- → Content
- → Padding
- → Border
- → Margin

For eg: If we create a paragraph and margin, the box model determines the space around and inside that paragraph.

What is a media query? Explain with a simple code.

→ A media query in CSS is used to make a website responsive according to the screen size of the device.

```
background-color: white; }
a) media (max-width: 600px) {
  body {
```

```
background-color: lightblue; }
```

Q. What are the features of bootstrap?

- - Responsive grid system
 - Grid system
 - Predifined Components
 - CSS classes
 - Javascript components
 - Easy and Fast development
 - Ready made components

• Write an example of Basic grid structure in bootstrap

→ Bootstrap uses 12-column grid system

```
<div class = "container">
```

```
<div class = "row">
```

```
<div class = "col-4"> column 1 </div>
```

```
<div class = "col-4"> column 2 </div>
```

```
<div class = "col-4"> column 3 </div>
```

```
</div>
```

```
</div>
```

• What is CSS structure?

→ CSS structure are used to select HTML elements and apply styles to them

- Element : p { }
- Class : .box { }
- ID : #title { }
- Universal : * { }

Q. What is CSS Background? List the properties.

→ CSS background are used to set color and control the background of an HTML element.

- background-color
- background-image
- background-repeat
- background-position
- background-size

Q. How can we overlap elements in CSS?

→

- box 1 {

position : absolute ;

left : 50px ;

top : 50px ;

z-index : 2 ;

}

- box 2 {

position : absolute ;

left : 80px ;

top : 80px ;

z-index : 2 ;

}

Q. What are different positioning properties in CSS

- 1) Static → Default Position
- 2) Relative → position relative;
top : 20px
- 3. Absolute → Positional relative to a positioned parent.
- 4 Fixed → stays fixed while scrolling.
- 5. Sticky → sticky to a position while scrolling.

• What is ECMAScript?

→ ECMAScript is standard specification for scripting language variable, datatypes, functions, object, classes.

For eg: - ES6 (introduced features like let, const, arrow function classes, etc.)

ECMAScript is the standard and JS most popular language that implements the standard.

• Difference between var, let, const, explain comparison dead zone.

Features	var	let	const
Scope	functional	Block	Block
Redeclaration			
Assignment			
Hoisting			

Compare Dead zone → Period b/w entering a block and actual redeclaration of let const

Ex: console.log(x);

let x = 10;
